Product Bin and Labeling Definitions

Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheet. For this reason, Lumileds bins LED components for luminous flux or radiometric power, color point, peak wavelength or dominant wavelength, and forward voltage.

5050RGBW 0.2W R Series Cat code following the format below:

A B C D	–	Flux for R-G-B-W
EF GH JK LM	–	Color for R-G-B-W
N P Q R	–	Vf for R-G-B-W

Where:

A B C D

– designates luminous flux bin (example: R=500 to 900mcd, G=1600 to 2200mcd, B=300 to 700mcd, W=6 to10 lm)

EF GH JK LM

– designates color bin for white and dominant wavelength bins for RGB (example: 10=620 to 625nm, 20=520 to 525nm, 30=460 to 465nm, 27=2700k)

N P Q R

– designates forward voltage bin (example: A=red 1.8 to 2.0V, E=green 2.8 to 3.0V, K=blue 2.8 to 3.0V,V=white 2.8 to 3.4V)
